REPORT OF EXAMINATION FOR WATER RIGHT CHANGE

Place of Use (See Attached Map)**PARCELS (NOT LISTED FOR SERVICE AREAS)**

350602510001, 350602510002

LEGAL DESCRIPTION OF AUTHORIZED PLACE OF USE

Lots 1 and 2 of Ridgeview Acres Subdivision according to the plat thereof recorded in the Walla Walla County Recorder's Office.

Proposed Works

Well, pump and distribution system for yard sprinklers

Development Schedule**BEGIN PROJECT**

Started

COMPLETE PROJECT

August 1, 2016

PUT WATER TO FULL USE

August 1, 2017

Measurement of Water Use

How often must water use be measured?

Monthly

How often must water use data be reported to Ecology?

Annually (Jan 31)

What volume should be reported?

Total Annual Volume

What rate should be reported?

Annual Peak Rate of Withdrawal (gpm)

Provisions**Wells, Well Logs and Well Construction Standards**

All wells constructed in the state must meet the construction requirements of WAC 173-160 titled "Minimum Standards for the Construction and Maintenance of Wells" and RCW 18.104 titled "Water Well Construction". Any well which is unusable, abandoned, or whose use has been permanently discontinued, or which is in such disrepair that its continued use is impractical or is an environmental, safety or public health hazard must be decommissioned.

All wells must be tagged with a Department of Ecology unique well identification number. If you have an existing well and it does not have a tag, please contact the well-drilling coordinator at the regional Department of Ecology office issuing this decision. This tag must remain attached to the well. If you are required to submit water measuring reports, reference this tag number.

Installation and maintenance of an access port as described in WAC 173-160- 291(3) is required.

Measurements, Monitoring, Metering and Reporting

An approved measuring device must be installed and maintained for each of the sources identified by this water right in accordance with the rule "Requirements for Measuring and Reporting Water Use", WAC 173-173, which describes the requirements for data accuracy, device installation and operation, and information reporting. It also allows a water user to petition the Department of Ecology for modifications to some of the requirements.

Recorded water use data shall be submitted via the Internet. To set up an Internet reporting account, contact the Eastern Regional Office. If you do not have Internet access, you can still submit hard copies by contacting the Eastern Regional Office for forms to submit your water use data.

Water Use Efficiency

The water right holder is required to maintain efficient water delivery systems and use of up-to-date water conservation practices consistent with RCW 90.03.005.

Proof of Appropriation

The water right holder must file the notice of Proof of Appropriation of water (under which the certificate of water right is issued) when the permanent distribution system has been constructed and the quantity of water required by the project has been put to full beneficial use. The certificate will reflect the extent of the project perfected within the limitations of the water right. Elements of a proof inspection may include, as appropriate, contracting with a Certified Water Right Examiner (CWRE) the source(s), system instantaneous capacity, beneficial use(s), annual quantity, place of use, and satisfaction of provisions.

Schedule and Inspections

Department of Ecology personnel, upon presentation of proper credentials, will have access at reasonable times, to the project location, and to inspect at reasonable times, records of water use, wells, diversions, measuring devices and associated distribution systems for compliance with water law.

Real Estate Excise Tax

This decision may indicate a Real Estate Excise Tax liability for the seller of water rights. The Department of Revenue has requested notification of potentially taxable water right related actions, and therefore will be given notice of this decision, including document copies. Please contact the state Department of Revenue to obtain specific requirements for your project. Phone: (360) 570-3265. The mailing address is: Department of Revenue, Real Estate Excise Tax, PO Box 47477, Olympia WA 98504-7477 Internet: <http://dor.wa.gov/>. E-mail: REETSP@DOR.WA.GOV.

Findings of Facts

Upon reviewing the investigator's report, I find all facts, relevant and material to the subject application, have been thoroughly investigated. Furthermore, I concur with the investigator that water is available from the source in question; that there will be no impairment of existing rights; that the purpose(s) of use are beneficial; and that there will be no detriment to the public interest.

Therefore, I ORDER approval of Application for change to Ground Water Certificate No. G3-21959(B), subject to existing rights and the provisions specified above.

Your Right To Appeal

You have a right to appeal this Order to the Pollution Control Hearings Board (PCHB) within 30 days of the date of receipt of this Order. The appeal process is governed by Chapter 43.21B RCW and Chapter 371-08 WAC. "Date of receipt" is defined in RCW 43.21B.001(2).

To appeal you must do the following within 30 days of the date of receipt of the Order.

File your appeal and a copy of this Order with the PCHB (see addresses below). Filing means actual receipt by the PCHB during regular business hours.

- Serve a copy of your appeal and this Order on Ecology in paper form - by mail or in person. (See addresses below.) E-mail is not accepted.
- You must also comply with other applicable requirements in Chapter 43.21B RCW and Chapter 371-08 WAC.

Street Addresses	Mailing Addresses
Department of Ecology Attn: Appeals Processing Desk 300 Desmond Drive SE Lacey, WA 98503	Department of Ecology Attn: Appeals Processing Desk PO Box 47608 Olympia, WA 98504-7608
Pollution Control Hearings Board 1111 Israel Road SW Ste 301 Tumwater, WA 98501	Pollution Control Hearings Board PO Box 40903 Olympia, WA 98504-0903

Signed at Spokane, Washington, this 24th day of June, 2015.

 Keith L. Stoffel, Section Manager

CFS = Cubic Feet per Second; GPM = gallons per minute; Af/y = Acre-feet per year; Sec. = Section; QQ Q = Quarter-quarter of a section; WRIA = Water Resource Inventory Area; E.W.M. = East of the Willamette Meridian; Datum in NAD83/WGS84.

Legal Requirements for Requested Change

The following is a list of requirements that must be met prior to authorizing the proposed change.

Public Notice

RCW 90.03.280 requires that notice of a water right application be published once a week, for two consecutive weeks, in a newspaper of general circulation in the county or counties where the water is to be stored, diverted and used. Notice of this application was published in the Waitsburg Times on April 16 and 23, 2009. No protests were received regarding this notice.

State Environmental Policy Act (SEPA)

A water right application is subject to a SEPA threshold determination (i.e., an evaluation whether there are likely to be significant adverse environmental impacts) if any one of the following conditions are met.

- (a) It is a surface water right application for more than 1 cubic foot per second, unless that project is for agricultural irrigation, in which case the threshold is increased to 50 cubic feet per second, so long as that irrigation project will not receive public subsidies;
- (b) It is a groundwater right application for more than 2,250 gallons per minute;
- (c) It is an application that, in combination with other water right applications for the same project, collectively exceed the amounts above;
- (d) It is a part of a larger proposal that is subject to SEPA for other reasons (e.g., the need to obtain other permits that are not exempt from SEPA);
- (e) It is part of a series of exempt actions that, together, trigger the need to do a threshold determination, as defined under WAC 197-11-305.

Because this application does not meet any of these conditions, it is categorically exempt from SEPA and a threshold determination is not required.

Water Resources Statutes and Case Law

RCW 90.03.380(1) states that a water right that has been put to beneficial use may be changed. The point of diversion, place of use, and purpose of use may be changed if it would not result in harm or injury to other water rights.

The Washington Supreme Court has held that Ecology, when processing an application for change to a water right, is required to make a tentative determination of extent and validity of the claim or right. This is necessary to establish whether the claim or right is eligible for change. *R.D. Merrill v. PCHB* and *Okanogan Wilderness League v. Town of Twisp*.

RCW 90.44.100 allows Ecology to amend a ground water permit to (1) allow the user to construct a replacement or additional well at a new location outside of the location of the original well, or to (2) change the manner or place of use of the water, if:

- (a) The additional or replacement well taps the same body of public ground water as the original well. RCW 90.44.100(2)(a),
- (b) Where a replacement well is approved, the user must discontinue use of the original well and properly decommission the original well. RCW 90.44.100(2)(b),
- (c) Where an additional well is constructed, the user may continue to use the original well, but the combined total withdrawal from all wells shall not enlarge the right conveyed by the original permit or certificate. RCW 90.44.100(2)(c),
- (d) Other existing rights shall not be impaired. RCW 90.44.100(2)(d).

When changing or adding points of withdrawal to groundwater rights (RCW 90.44.100), or when consolidating exempt wells with an existing permit or certificate (RCW 90.44.105), the wells must draw from the *same body of public groundwater*. Indicators that wells tap the *same body of public groundwater* include:

- (a) Hydraulic connectivity.
- (b) Common recharge (catchment) area.
- (c) Common flow regime.
- (d) Geologic materials that allow for storage and flow, with recognizable boundaries or effective barriers to flow.

INVESTIGATION

In considering the proposed application, the investigation included, but was not limited to, research and review of: (1) appropriate rules and statutes; (2) other water rights, permits, and claims; (3) USGS topographic maps and aerial photographs; (4) existing and proposed wells, irrigation system, existing and proposed places of use; (5) Chapter 173-532 WAC Water Resources Program for the Walla Walla River Basin, WRIA 32 and Watershed Planning; (6) State of Washington Irrigation Guide (Natural Resources Conservation Service 1997); and (7) discussions with Department of Ecology regional program staff.

A field investigation was conducted by Dan Tolleson and Eric Hartwig on June 8, 2015, with Greg and Ramona Large. The project is located just to the south of the City of College Place, Washington. The water right is located in the Walla Walla Basin, which is managed under Chapter 173-532 WAC Water Resources Program for the Walla Walla River Basin, WRIA 32.

The authorized place of use describes 1.53 acres of land, within Lot 3, currently owned by Stanley Hughes. This parcel of land has a house, driveway and a large irrigated yard. The portion of the place of use lying behind the house and yard is a field with a few trees that is currently not irrigated. The originally authorized well is located within this lot and remains the only source of water for Lot 3. This well is proposed to be retained to provide water for the portion of the water right that is not moved. The well has a submersible pump with no flow meter.

The proposed place of use consists of two adjacent lots that total 2.25 acres of land, currently owned by Greg and Ramona Large. The eastern lot, know as Lot 1 has a house, outbuilding and driveway. The remainder of this lot is an irrigated yard that utilizes pop-up sprinklers. The western lot, known as Lot 2 has a small garden irrigated with yard type sprinklers on a hose, with the remainder of this lot being

undeveloped. The proposed well is located with Lot 1 and is intended to be the source for the portion of the water right moved to Lots 1 and 2. This well has a submersible pump with no flow meter.

History of Water Use

Ground Water Certificate No. G3-21959C was issued in 1980 for 20 gallons per minute, 5.5 acre-feet per year, for the irrigation of 1.5 acres and 1.34 acre-feet for single domestic supply. Aerial photographs were used to help verify the extent of development, historical and beneficial use of this water right. Historically, the entire place of use was irrigated less the house and driveway which is approximately 1.3 acres. In 2009, this application for change was received. It requested to change a portion of the place of use and add a well to the lots immediately to the east of the original project. A new house was built within the proposed place of use in 2009. Shortly thereafter, 0.65 of an acre was irrigated within the proposed place of use. This is consistent with quantities that were proposed to be moved to this site. Irrigation within the original place of use has been reduced to approximately half of what was historically irrigated or 0.65 of an acre. Therefore, a total of 1.3 acres of irrigation have been put to beneficial use under this water right.

The maximum authorized water duty of this certificate is 5.5 acre-feet per year for the irrigation of 1.5 acres. Historically, the highest water use under this certificate was for the irrigation of lawn. The State of Washington Irrigation Guide (WA210-VI-WAIG) states that an estimated 2.9 acre-feet per acre, is required for grass/turf in the Walla Walla area. At a 75% efficiency rate of application, the maximum water duty, for the crop listed above is 3.9 acre-feet per year, per acre. This results in an allocation of five acre-feet per year for the irrigation of 1.3 acres.

The maximum authorized instantaneous quantity of this certificate is 20 gallons per minute. It is estimated that this instantaneous quantity was historically put to full use. It appears that the existing and proposed irrigation systems may have more capacity than authorized under the right, but this was not confirmed since there was no flow meter. Water production for each system will need to be verified and reduced if necessary so as not to exceed the authorized quantity.

The house built within the proposed place of use (Lot 1) uses a permit exempt well for domestic supply. This exempt well was constructed within the ten acre or less zoning area, is completed into the gravel aquifer and was developed after 2007. Therefore, this permit exempt well is restricted from using outside water from May 1 to November 30, in accordance with WAC 173-532. This exempt well is the proposed point of diversion under this application.

Proposed Use

The applicants propose to change a portion of the place of use and to add a new point of withdrawal. This change is intended to split the irrigation portion of the water right into two equal parts. The single domestic supply portion of the water right is proposed to remain with the originally authorized house. Given the history of beneficial use listed above, the water right has been reduced to the following quantities and split accordingly.

Summary of Water Right Split for Irrigation Portion of G3-21959C

Land Owner	Lot	Portion	Parcel(s)	GPM	AF/Y	Acres of Irrigation
Hughes	Lot No. 3	A*	350602510003	10	2.5	0.65
Large	Lot Nos. 1-2	B	350602510001 & 350602510002	10	2.5	0.65
total				20	5	1.3

*This portion of the right also has an additive in-house single domestic supply of one acre-foot

Measuring and Reporting Water Use

An approved measuring device must be installed and maintained for each of the sources identified by this water right in accordance with the rule "Requirements for Measuring and Reporting Water Use", WAC 173-173, which describes the requirements for data accuracy, device installation and operation, and information reporting. It also allows a water user to petition the Department of Ecology for modifications to some of the requirements. Water use data shall be recorded monthly and maintained by the property owner for a minimum of five years. The maximum rate of diversion/withdrawal and the annual total volume shall be submitted to the Department of Ecology by January 31st of each calendar year.

Well Tags

WAC 173-160 contains requirements for well drillers, system operators and/or owners to tag new and existing wells with identification tags supplied by Ecology. The well identification program creates a standard system to identify all newly constructed or existing wells, so that property owners and various agencies can readily share well data. In addition, Ecology field staff use the well tag to identify the well. Accordingly, this decision contains provisions requiring each well to be tagged with a unique identification number.

Other Rights Appurtenant to the Place of Use

A review of Ecology records were conducted for existing water right certificates, permits, and claims appurtenant to the project. The search focused primarily on Section 2, T. 6 N., R. 35 E.W.M. The review of Ecology records shows two other water rights appurtenant to the authorized and proposed places of use.

Lower Stone Creek Adjudicated Certificate No. 44 authorizes up to 0.84 cubic feet per second, for the irrigation of 63 acres, within a large legal description. This water right is not used within the authorized or proposed places of use of Ground Water Certificate No. G3-21959C.

Ground Water Certificate No. 6896-A, together with a relinquishment issued 9/29/2004, authorizes 200 gallons per minute, 60 acre-feet per year for the irrigation of 24 acres; two acre-feet for domestic supply and one acre-foot for stockwater, all within a large legal description. This water right appears to be less

any water diverted under Lower Stone Creek Adjudicated Certificate No. 44. This water right is not used within the authorized or proposed places of use of Ground Water Certificate No. G3-21959C.

The validity and extent of above listed water rights are not determined in this report.

Hydrologic/Hydrogeologic Evaluation

Applications for change/transfer of water right permits and certificates are governed by RCW 90.44.100, which states in part that: the holder of a valid right to withdraw public ground waters may, without losing his priority of right, construct wells at a new location in substitution for, or in addition to, those at the original location, or he may change the manner or the place of use of the water. Such amendment shall be issued by the Department only on the conditions that: (1) the additional or substitute well or wells shall tap the same body of public ground water as the original well or wells; (2) use of the original well or wells shall be discontinued upon construction of the substitute well or wells; (3) the construction of an additional well or wells shall not enlarge the right conveyed by the original permit or certificate; and (4) other existing rights shall not be impaired. The Department may specify an approved manner of construction and shall require a showing of compliance with the terms of the amendment.

The following hydrogeologic analysis was written by John Covert, Senior Hydrogeologist in the Water Resources Program Technical Unit in Ecology's Eastern Regional office.

The point of withdrawal for this change application is located within the Walla Walla Basin, a hydrologic sub basin of the Columbia Plateau. This basin developed as a structural trough within the Columbia River Basalt Group that was later overlain by unconsolidated sediments. The lowermost sediment unit is referred to as the "blue clay" which rests directly on the basalt basement rock. Directly overlying the "blue clay" and interfingering with it, is the gravel unit. The various unconsolidated gravels serve as the aquifer material which forms the uppermost, unconfined, water table aquifer. Aquifers are also present within the consolidated, Tertiary-aged, Columbia River Basalt Group. These predominately confined basalt aquifers are separated from the gravel aquifer by the "blue clay" unit.

The existing point of withdrawal for this change application is a 6"x175' well constructed in 1971 in the SW¼ NW¼ of section 2, T06N R35E. It was completed in unconsolidated sand and fine gravel and reported a static water level of 57 feet. The proposed well is listed as a 6"x201' well with a well tag of AKO729. It was constructed in 2009 in the SW¼ NW¼ of Section 2, T06N R35E. It was completed in gravel with brown clay and reported a static water level of 47 feet. Both the original point of withdrawal and the proposed point of withdrawal are completed in the same body of public groundwater, the Walla Walla gravel aquifer.

Impairment Considerations

"Impair" or "impairment" means to 1) adversely impact the physical availability of water for a beneficial use that is entitled to protection, not including earlier filed applications (HB 1832); and/or 2) to prevent the beneficial use of the water to which one is entitled; and/or 3) to adversely affect the flow of a surface water course at a time when the flows are at or below instream flow levels established by rule (POL-1200); and/or 4) degrade the quality of the source to the point that water is unsuitable for use by

existing water right holders (WAC 173-150). Demonstration of impairment would require evidence of a substantial and lasting or frequent impact reflecting such conditions.

The authorized and proposed wells withdraw water from the same source according to the Hydrogeologic Evaluation. The portion of the right proposed for change, has been exercised and beneficially used from the proposed source for the last five years. There has been no documented history of pumping interference problems between existing wells in this area. The proposed change to add a point of withdrawal will not enlarge the quantity of water withdrawn from the aquifer, nor increase the irrigated acres. Several wells already exist in the vicinity of the proposed location. The instantaneous rate of withdrawal for the wells associated with this change application will not exceed what is already being exercised. It is not anticipated that the proposed change would cause any impairment to existing water rights.

Public Interest Considerations

There has been no public expression of protest or concern regarding this specific proposal, and no findings through this investigation that indicate there would be any detrimental impact to the public welfare through issuance of the proposed change.

Conclusions

In accordance with Chapters 90.03 and 90.44, approval of this application to change a portion of the place of use, and add one point of withdrawal as granted under Ground Water Certificate No. G3-21959C will not enlarge the quantity of water historically authorized, nor will it impair existing rights or be detrimental to the public welfare provided the terms and conditions above are followed.

The amount of water recommended is a maximum limit that shall not be exceeded, and the water user may only use that amount of water within the specified limit that is reasonable and beneficial. This authorization does not increase in any way the original amounts authorized.

RECOMMENDATIONS

Based on the above investigation and conclusions, I recommend that this request for a water right be approved in the amounts and within the limitations listed below and subject to the provisions listed above.

Purpose of Use and Authorized Quantities

The amount of water recommended is a maximum limit and the water user may only use that amount of water within the specified limit that is reasonable and beneficial:

10 gallons per minute
2.5 acre-feet per year
Irrigation of 0.65 of an acre

Point of Withdrawal

SW¼NW¼ of Section 2, Township 6 N., North, Range 35 E.W.M.

Place of Use

As described on Page 1 of this Report of Examination.

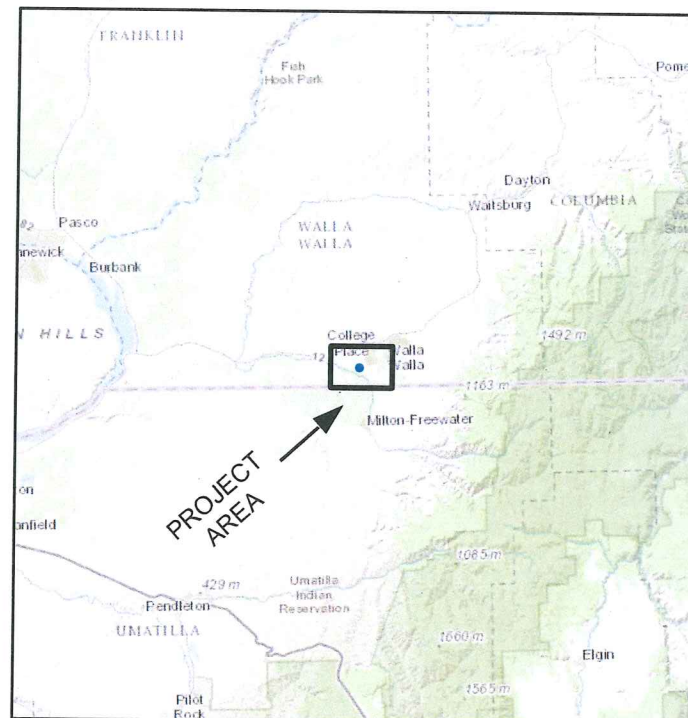

Dan Tolleson, Report Writer
